

Towards establishing the human rights.....

Introduction

The phases of life as described in Vedic encompass impure, impure-pure, pure phases. The impure phase is towards understanding the physical body, the organs, sensitivity and reactions of human for the senses and with the organs to encroach the environmental components which forms a major part of his life. The human organs grow huge for the food system is mostly the carbohydrates and for the physical activity of encroachment and grabbing, human need to be strong physically and for carrying out life too, for there was no mechanical means to make their job easy. For production of they got to work a lot to prepare land and for the weather they need to sow the seeds which are laborious and consume almost all their potentials. They had no time for entertainment but they made it integrated towards their job which brought out the tradition cultures of native songs, and dance as folk lore that conveyed their registry of civilization. For the wealth and advent of mechanical means of transport, came into existence the illusions of life to create interest in living, to take more activities for the ease induced in performing tasks, for till then, the life with the resources existing did not made any tasks of victory but accomplishment. The illusions, the Maya of the world brought wars for the achievements made for time, space, power, intelligence and greed which differed from person to person, and that make comparison, competition, rule over one another, dominance and authority and the same continued even after the world wars, among individuals, thus leading to unhealthy situations all across the world. The transportation which formed the main mode of communication and exchange of information progressed to telecommunication, the mobile communication and to internet which made the virtual space to complete utilization and that shrunk the social economic stance of an individual to his reach that the trait which made the tool of living, as violence transformed to intelligence and which further progressed to brilliance the openness to accept changes and information for the purpose. when violence helped the physical existence, the intelligence helped for brain oriented existence and brilliance make all to live for the mindful living that the task is not resourceful by physical and mental well being of one's self but resourceful by moral well

being of all with the contributions of the might of one to all complimenting their reach.

We shall traverse the path taken to establish human rights since the inception of UN to establish world peace and constitution of India towards establishing secular, sovereign, democratic, republic governance. The first article of Universal declaration of human rights is as follows,

All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.

The preamble to constitution of India goes as follows,

WE, THE PEOPLE OF INDIA, having solemnly resolved to constitute India into a [SOVEREIGN SOCIALIST SECULAR DEMOCRATIC REPUBLIC] and to secure to all its citizens:

JUSTICE, social, economic and political;

LIBERTY of thought, expression, belief, faith and worship;

EQUALITY of status and of opportunity;

and to promote among them all

FRATERNITY assuring the dignity of the individual and the unity and integrity of the Nation;

IN OUR CONSTITUENT ASSEMBLY this twenty-sixth day of November, 1949, do HEREBY ADOPT, ENACT AND GIVE TO OURSELVES THIS CONSTITUTION.

The democracy had not reached to its core for we followed the procedures of imperialistic governance and the policy of republic to have public representatives had not differed much from imperialism for the social service they made became interference for the benefits they made available to public. That, in due course of time created competition and negative emotions and self centric approaches creeping in for which we experience the drastic downward trend in social economic status of the globe as a whole for the developed countries dominate towards spending on wars, which their people ought to

accept and the other countries need to make them defending and prepare for wars for the established stance of developed countries and the UN which has the ambition of bringing all under one roof and which has to take care of the security of the world by taking the military forces of all countries into its control, is not even questioning the lead of developed countries in the warship. Here also we find the developed country dominate, and is a dimension of imperialism though the questioning right is not to the public then, for the rulers created trust and assured security to them.

There is no doubt the civilization is advancing very rapidly for the illusions make them reach their wishes much easily for the group efforts and team efforts for the benefits each one gets both in positive and negative terms, the negative is mostly seen because the common schemes did not prepare the beneficiaries rise to the levels of receiving and maintaining them that mediation took to make monetary benefits out of them for their share. This is the reason for accumulation of money illicitly in foreign banks and most of the account holders are party based politicians, lobbyists and industrialists. The rules are framed and adjusted for them making the violation transparent and that the individual complaint mechanism is enacted in UN, we can set the issues right by whistle blowing which they should accommodate for the need to maintain neutrality and to hold responsibility of the integrity and progression of global civic.

“Every individual is born free” is the basic right for making one to live on his own realizing his good and bad, strength and weaknesses with the conscience and reasoning conviction of contribution from others that he grows, establishing his own designed environment towards which the society should contribute to him including his own family and it should be progressive to his own interests and it should be remembered that the opportunity to live with a career and personal space for one’s own design is very much possible in this globalised era and there cannot be justification towards hard work and physical strain correlate with the illusion forces of time, space, power, knowledge and greed makes the living peaceful and monetarily satisfied, it is the focused mind and quality of effort that effortless output with mind driven skills always make best and straining without interest towards routine or the mass making is not needed.

“Every individual has equal dignity and rights” checks the priority for authority and the reservation policy every nation has. Those were drawn for eradicating poverty but were ruining the dignity and rights of the poor for the facilities have been extended to them treating them as laggard earners, treating them to be cursed and for the benefits reaching them without efforts or due share by them, the wish to maintain the facility always for which the progress expected out of the activities became regressive towards them, making their status as permanent mark on them and they never come out of the situation with equality and the society ever denies them for they do not mentally prepared to accept the undue benefits they enjoy out of communal reservation , racism and discretion. The same burst out to be frustration and targeted violence which people of governance should realize and bring in equality of opportunity and status with every one accepted as citizens of the country to claim for the opportunity and status for his earned skills and his interest to enhance the same. In this a citizen is to give his identity as a living being of the nation and his activities completely to transparency and accountability by making due tie and connectivity to the governance which keep him away from the terrorism and other negative influences. There is no need to produce the community details, the religion, marital status and identity verification for every individual deserves their due right to have their private details to their own and the same do not intimidate their right and they will have the cross referencing features if the basics of approach to governance is not established as true for purpose.

“They are endowed with reason and conscience and act should one another in the spirit of brother hood” is for bringing in amity with arbitration and the right of every human being to know why he is given with such treatment and action for his due reaction to the core of the issue that solves the issue in arbitration. The education system made human to think in an restricted manner and trust what had been proved and believed for years together and they don’t give space for evolution and likely changes of concept to the level of topsy-turvy for the reactions of the concept with the believers and followers which goes unnoticed and burst out as calamity in an unforeseen situation where the same is not expected. This is due to the individual perception excluded from evaluation, correction and enhancement but the concepts reproduced finds a place which will never coincide with the reality for the evolution too is rapid for rapidity of the

activities the globalization has induced. The deviation between the concept and the reality forces a compelled situation on the performer to do the task with tricks and intelligence where the expected result is forced on to the situation with tools of science and mathematics as uncertainty, hypothetical analysis, statistics and probability.

The reality faced with one's own perception of the happening always gives simple solution which is ever progressive for the evolution is an integrated component into decision hence the proactive measures and preventive activities. This makes everyone inclusive and checks violations form happening for the scenario is transparent and set to accountability. When this is understood for the Ecopsychology, the activity of viewing the environmental changes for the benefit of human for furthering his life in a better manner, if the environmental changes are viewed without anxiety, coercion and blame we will find the global warming is not a curse but boon to generate electricity, the tsunami is not a curse but to induce lifestyles with natural materials and to live with virtual space to gain balance between personal and professional life. As experience adds to education so is the bountiful information add to professional experiences and enhance expertise that the basic need to all officials should add computer and internet connections and that rises the authenticated sites to reach the people that there will be better professional output specific to an individual which makes him claim his promotion and the salary unique to him. This avoids the comparison and competition that there will be brotherhood for which it should be instilled in mind that everyone has ample opportunities to choose and work on and there is no reason for conflicts at all if the personal and professional space of each individual is assured. For this reason the governance should reform to assure the space for them to the core of JUSTICE, social, economic and political, LIBERTY of thought, expression, belief, faith and worship, EQUALITY of status and of opportunity. This makes the individual focused to his own development, focus on his own family which brings him the personal satisfaction that the competition free environment makes him open and remain available to sharing the expertise and knowledge that the purpose of education to enhanced civilization will be established. Surpassing all others with the feel of self confidence and satisfaction make each individual remain with social responsibility to offer all they can with real good interest and to the core of what he can give for the best of the situation that

there exists brotherhood all across the globe. The key lies in expanding the reach of the individual globally to perform his regional task which would upgrade the scenario to global expectations for which one need not visit foreign countries , but have access to internet to observe the similar situations that will get into them for their mindful perception and upgrade their skills. The lifestyle too will get enhanced for they cannot use their local language and the existing life styles which need diplomacy and decorum and they cannot put their personal frustrations and their negative emotions, ego into their task that the intelligence to find reasons gets replaced with brilliance to meet the purpose.

Fraternity deals to union which is now not between the neighbors and related groups to remain in network for the mutual benefits but between individuals of unique specialty and skills who could form a group to make the purpose met to the best of efficacy that the same needs openness to accept facts, conviction for the facts and everyone has due role to play which makes rejection for the expected level of output , but each one in the chosen profession has a unique role to play if understood for his interests and skills and give choice of his own to move up that we won't have soldiers but everyone leading towards the purpose of the task and the difference is in making all their performance, blended to form a continuity with the strand of humanity and giving hands to complete his task in his own way. This makes all connected for purpose with inclusion where there will not be anxiety, coercion and blaming, but there will be inclusion, joy, happiness and sharing that completes the task in no time. This makes the international security towards diplomacy where there cannot be wars but only discussion towards arbitration. The existing scenario of the Srilanka , China, Pakistan towards India are for the policy of the individuals in India leading the discussion which aggravate the situation, but they must be towards establishing facts finding amicable solution favoring all to which India should lead for its position top among the countries concerned. The responsibility of India is not only in making its pride stand as number one, first in the forum, whatever may be the task, even war, but to make the concerned convinced of facts to join hands to make the global civic live with the assured dignity and self esteem. The move of the other neighboring countries and the developed countries to fund them in warfare gets checked if the UN for its neutrality move to establish the regional offices in all countries which was a secretary earlier. This may be with Srilanka

first to start with, to end the issue, the solution is simple, and the citizens of Srilanka are to be given equality of status and opportunity removing the reservation policy that the same gets transferred to all other countries. The UN's move to bring all countries under one roof needs the individual complaint mechanism established in each country to report them the violations as preventive measures and give them due advices for development is need of the other. The activities of sending committees are of no use in the existing scenario, for they don't need words of confidence, but actions of confidence from global nations through UN. The Kutch Island is to India by all means for the lives of thousands of fisher man of India are connected there. When the activities and the consequences are rapid, the decisions also must be rapid towards progression that checks the aggressive move of the egoistic leaders to assertive decisions of responsible leaders. The regional office to work completely online for every country makes the union mindful to the inclusion of every individual as global civic for the integrity as humanity. This could channelize the developed countries to UN, that their economic value reinforces the human development towards living with peace.

Sovereignty refer to independence, autonomy and self governing status which should be the goal of UN to inculcate within every country, that the financial assistance should not be in grab mode, but a genuine assistance obtained from the world bank that they should show progress and gain repaying capacity for which the fiat money system reaches the purpose of making every individual assured of security. The security of a nation comes out of, diplomacy, where the key concept is peacekeeping and for which the war can never be the tool which was practiced for the low level of perception and low human values of authority rules as governance. For having established sovereign status, for which one of the vital organs of the United Nations, the trusteeship council got dissolved. But truly speaking the sovereignty is to every individual which had not been instilled for the spoon fed activities of governance, which gives the fish when they ask for a net. This kind of sustained activity of governance do not make the public progress but regress and we need to actually start form the scratch for the reformation of common civic for we had satisfied with the existing principles of governance, only the mediators, their greed and interference. The true core of significance, the common civic is yet to be focused and it is high time the need for

reformation enforces and for which the individual complaint mechanism comes into existence. True sovereignty is in setting every individual free to live to his own freedom. The way to reach sovereignty to the core of every individual is inculcating social responsibility within him which is driven by his own conscience that one needs no supervision, but can get what he wants for his proven skills and contributions making him deserving for the same explicitly. The acceleration always will be there from within for a better prospect for the evolution makes it happen, the exposure and experiences, the related perceptions set the acceleration that the environment plays the due role for which the same should be made transparent, sharing, complimenting, and pleasure and a welcoming attitude to include people, which is needed to establish social stance.

Socialistic attitude is for the social responsibility one gives, as the social service made people to remain as social interferences grabbing private feelings and space of the common civic. Social attitude comes within every one if they consider equality of opportunity and status to the claim of an individual. The imperialism which lasted for taking the responsibility for the learned expertise of the council and the dedication of dynasty to share and organize the benefits became self oriented, that there need to be democracy truly established to make the society truly open to changes, and incorporate the new ideas for authenticity that they will be egalitarian society. The skill of the technology cannot be defined but only visualized, felt and experienced holistically for which the education and skill development must be qualitative and upgrading the individual with conviction. Socializing is not in making masses, but finding comfort among the groups, the same lies in making the individual stance accepted and the designed space and contribution valued by others. Each human being in his phases of self actualization with his physical body interacting with the environment find the ways to power of will, power of action and power of knowledge which make them skillful, resourceful and dissemination of knowledge for the perception out of experiences. In the existing scenario, we have no space for living to find the power of will, power of action and power of knowledge dissemination which is unique for an individual forced to existence to live in the masses which is assumed to be socializing where the dominant, aggressive and authoritative people prevail as leaders which is leading the globe to disastrous situation for the others do not have choices, they are being restricted to existence and survival.

In this situation, the education do not help people to establish their rights and remain civilized but remain intelligent to find tricks to suppress people and turned to their authority as orders and commands for which we find the expertise, and experience do not find innovation and originality of individuals. We oblige the orders of government, oblige the orders of the Head of the department, oblige the principles of saints and leaders, where we don't travel within to find who we are actually and where we can perform the best. Living to the tunes of the leaders and the saints do not give out who you are for it is you who can make the best of yourself, and the same cannot be found by others. For this reason we find slips among the celebrities and amazing performance from the average, the matter lies in the focus and interests to the best of his concentration. This demands the activity for the benefit of majority be focused and not what all a celebrity says for human is to err. The burden, the responsibility, the flattery, the lime light makes them err more when they hold the tag. It must be to all individual with autonomy, where the strands of nature, the ecological balance bind them and where we can find extraordinary out put to the best of purpose.

Secularism is essential in this scenario of terrorism threatening the whole world for they have been grown for the frustrations of the Muslims as minority, where they need a forum to establish themselves and their negative emotions have been utilized by the authority of the developed countries for their benefits. Pakistan has regressed much in spite of getting freedom from India for the same has no resources on its own and the same has no schemes for human development, who will take the responsibility for them?.If they had been with India, they have inclusive plans that they would have moved much ahead by now.If the trusteeship council of UN had addressed on this progressively there could have been reunion of Pakistan to India. If UN could have been to transparency and accountability, there could not have been bargain of Kutch Island for the vote towards the Bokran bombshell testing, which is ruining the lives of many fisherman, when the testing is not giving lives to none, the same satisfied the ego of an Indian leader. The activity of closing the trusteeship council is to give freedom to developed countries to encroach the human resources of developing countries which we are witnessing now. There are a plenty to be done by the council for global human development. When everyone is treated equal

with assuring individual dignity and self esteem, giving him his due for his skills and contribution, the global peace can be established for which secularism is very much essential. The culture and tradition in the name of religion should need no encouragement for they are the part of the evolution and can never be sustained. The elephants in temples are to be handed over to the wild life sanctuaries for they need to have their native habitat. The temples should take a reformation as place of public assembly, for common cause which will orient people to be ethical and genuine. The assets to the temples should be added to the treasury that they get finally established as old age homes and service centers to accommodate the poor and they hold due place in poverty alleviation for the poor are more closer to the GOD.

The democracy is the governance by the people, for the people, of the people. The same came into existence for the exposure of public to various facets of life, and finding the advancements in civilization to their requirement is less for the schemes are planned by the dynasty, the council who seldom fix themselves in the place of beneficiaries. This soon found difficult for the governance to democracy then was to get public votes for every activity. People could not focus into their profession since they have to physically make their vote which consumed a considerable part of their time for which the republic, finding representatives for them who could take care of all the activities pertaining to public and vote on behalf of them. This again lead to mediation, party based politics and individuals of authority finding self centric benefits out of the funds allocated for public schemes that the growth was not to the expected levels and people developed a hatred towards the governance for they impose restrictions making them to the authority of the public and establish rules for their easy that are simplistic. The rules are regulations to make use of the resources optimally to provide the benefits to all with equality that the activities of the government are to be with simplicity meeting the individual needs. For the literacy and exposure, education and experience, people do not need schemes for masses to which they are restricted, but need individual specific assistance which is due to them to their level of understanding and priority, when one of same status may give priority to agriculture, where other wish to give sell his land and take up a business, and other a career all cannot be given with mulch cows and sheep, which is a move to regress for the attitude of taking equality as uniformity. Not everyone is same,

they have their own intrinsic qualities which need to play the role as citizen where the society formed will have private space assured to all with due understanding and there we cannot see communal and targeted violence which is possible where frustrations and negative emotions prevail for the restrictions imposed upon them to suppress them much behind the status where they can head upon as they are. Hence the republic now should accommodate individual representations as base for the activities and the role of governance is to remain accessible for public and respond to their needs with due assistance.

Conclusion:

For establishing the human rights and world peace, the core of principles to be held by the governance are the article 1 of the Universal declaration of human rights and the preamble to the Constitution of India, and that makes the global governance decentralized to each nation and state, all brought under one umbrella of humanity, inclusive with the components of ecosystem to further their living with peace. This makes the citizen centric governance with simplicity giving space for all the freedom to express the thoughts. Life is simple if we realize we need to earn only for living with genuine saving. Blocking the opportunities of others with authority and dominance make the individual regress from his position which is detrimental to him first rather than the suppressed. The magnitude will certainly be in line with the magnitude of authority that we got to enhance skills if we wish to progress and there is adequate space for individual claim in the fundamental rules for government services which did not stipulate the vacancies and those were the days when the fiat money system was not introduced, which shows for inclusion of potential reserves, the governance need only the mind not the money.
