CHAPTER 11 STREAMLINING THE ECONOMY

SYNOPSIS

INTRODUCTION:

The world in which we live today is not a sudden globe which was formed in fraction of second. It is made by cluster of dust particles and gases combined together. It took centuries from there for the first man to evolve from the ape. Here in this thesis I had thrown light on the travel of various social components like origin and evolution of life, society, civilization, relationships, education, technology, parenting techniques, environment, government, economy and cultural diversity. The whole thesis is about where the world has originally started, its travel for centuries, the path in which it travels in the present, the consequences and the strategy to be adopted for the progressive development of the global society.

When given a keen observation it is becoming evident that until certain period of time the entire world was taking a positive progression and immediately with the effect of globalization this progressive travel was drifted to rapidity where the consequence in the long run is recorded to be highly destructive.

Let us take a look at the various social components, its current standard and the quality it has to develop for enhanced and a self-sustained global society.

CHAPTER 1: ORIGIN AND EVOLUTION OF LIFE ON EARTH

- The origin of the life on earth is an interesting phenomenon. For a better understanding I have started the discussion from the origin of earth in this chapter.
- Billions of years ago by the coagulation and gravitational contraction of large cloud of gas and dust, the solar system was first formed. This dust is found to be got from the supernova (the explosion of an old massive star). Then later on the sun was formed and got ignited by the process of nuclear fusion which gave out heat and light. The particles in this cloud fused to form planetisimals which later gathered into a mass forming the micro-planets.
- Planets were then formed in the molten state initially by the collision of these micro-planets. As a result of mars sized large planetoid colliding into the earth, little bit of hot rocks splashed off during collision and added about 10% of the earth's surface in the formation of moon.
- The molten iron which was heavy sank down to become the core of the earth and the lighter atoms rose to the surface. Most of the gases floated away into spaces. Due to the collision of comet, water was brought to the earth which

was converted into steam forming the atmosphere as the earth was very hot then.

- The planetary bombardment stopped as most of the planetisimals were gone and a stable rocky crust was formed all over the earth and the moon. About 4.3 billion years ago the earth cooled and the steam in the atmosphere condensed into rain forming the water. Mostly the earliest RNA molecules must have formed at this eon when the first protein was formed by the fusion of amino acids. This becomes evident from the experiment of Stanley miller which had a chamber containing only hydrogen, water, methane and ammonia. He boiled the water and exposes the elements to an electric discharge like lightning, simulating earth's early process. After a week, he found organic compounds have formed including amino acids, the "building blocks of life".
- And it is from here the life in the earth has originated which in days evolved and resulted in the evolution of man. The evolution of life from the origin point to the evolution of man is dealt in respective epoch, period, era, eon and super eon.
- For the final part I have dealt about the trend in which the life is travelling with the environment, its consequences and the step that has to be taken for making both the environment and the life go hand in hand.

CHAPTER 2: THE PHASES OF SOCIETY

- In this chapter I have dealt about the different kinds of society in the aspect of strata, status and time period. The society that has been in practice from the evolution of man like the hunter-gatherer society, tribal society, stratified society, urban society and rural society; different kinds of society on the basis of status like Upper class society, Middle class society, lower class society and societies on the basis of time period like the ancient society, medieval society and the modern society.
- The very first humans originated in groups as they were the evolutionary of grouped animals, ape. The very first community of living organism is found in proteins. Proteins are formed when group of amino acids are favored by suitable environmental conditions. After the origin of man in Paleolithic age, they lived in groups forming societies.
- Varied aspects of life in every kind of societies have been dealt with, like their awareness towards technology, their mode of subsistence, their living environment, their family pattern, the cultural practices, the religious and the caste system and the importance given to these by the individuals of different societies in accordance to the time period.
- The equalities that men and women got in mutual at different period is also dealt, their leisure activities, their housing patterns, the way in which they

were treated, the status of each society, the hierarchy followed in each stage are also dealt in this chapter.

- After the invention of Internet the whole society has changed where automation, online and internet became the slogan of the today's generation. But the early traditional pattern is followed by the aged. They have a model imagined in their mind and that makes the society. Hence the present society is partially virtual and partially traditional.
- By the flow of time it is for sure that the society will completely get oriented virtually. Social Networking sites like Orkut, Facebook, Twitter, LinkedIn, etc. and messengers like Gtalk, Yahoo, MSN, Skype, Rediff etc. have become the most comfortable and easily accessible mode of communication for the youths of the present. They are able to get in touch from their school days friend to their relatives residing at the other end of the world in a single stroke.
- Hence upgrading the mental preparedness of the society to this level is highly important and parents' safe guarding their child with their childhood societal setup will make the child go deviant and where would be the transformation? At one end the world is getting upgraded with technology and is endured to change in the life style and in the other end if we hesitate to catch up with the changes and start getting stagnated where will be the progression?
- I have answer for all these questions in this chapter and have dealt about the transitions along with the change that is needed to fit these transitions.

CHAPTER 3: THE PATH AND THE DESTINY OF CIVILIZATION

- In this chapter, we take a look upon the various civilizations that have mended the living individuals to this level. From the ancient Greek civilization to the modern globalization, the civilizations at different periods of time have been discussed in this chapter. Civilization is nothing but the process of changing the animal evolved barbarian into an individual filled with humanity and morality.
- If given a keen observation in the trend of civilization to a certain point of time there was real civilization and there is a sudden drift towards rapidity where the civilization failed to work and is being evolved just for the sake of name. At present we are moving long way back from destining true civilization. If the same situation exists then we may go worse than the early barbarian.
- In this period of busy professionalism, people don't have time to relax and look back the way they have travelled which at a point of time make their travel reach at some other place away from their targeted destiny and in the same way as we don't take a look back on how the civilization has travelled, what was its basic purpose we are now travelling away from the civilized destiny.
- The advancement of man from the hunting to agriculture and the likewise advancement in every civilization in each aspect is dealt in this chapter. The advancement in technology, the architectural advancements, the agricultural advancements, etc have also been dealt elaborately in this chapter.

- There have been so much advancements accomplished in the journey of civilization but we have forgotten whether the human quality is continued to civilized or have we left it somewhere long way back. This basic thing makes us let go all the other things we have advanced in.
- Civilization is meant for the whole humanity and not particularly for any region. Hence globalization is important. Nothing is static, change is the key term that lives every millisecond of its life. Globalization cannot degrade any region if it is perceived in the right way. Positives from every corner of the world should be taken and made spread all over the world which could make the globalization a successful one.
- I would like to stress that no one in this world is superior to other. For example let us consider the case of inequality between the male and female gender. Men are physically strong and women are mentally strong. Men can alone do physical jobs but they cannot distinguish whether the job is necessary or not. Women can distinguish the must and unnecessary but cannot implement tough physical jobs. Hence both this physical and mental strength must go hand in hand for a better global standard. The self centered approach of the individuals must change. I'm what I'm, this is the most common and famous status message of the youths in all social networking sites. I'm what I'm strategy is excellent to develop individualism when it doesn't disturb or spoil others. But to a point the characterization must be flexible as all are not tamed 100% at the start. So you can create your own path for destiny checking it to be ethical way by not spoiling the one on your way.

CHAPTER 4: THE FOCUS ON PARENTING STYLES

- In this chapter I have dealt about the importance and care the parents should have in taming their young ones. The immediate expectation on a newlywed couple by the family and the society is attaining the parenthood but are they giving concern or choice for the couples to basically prepare their selves mentally? The answer from the maximum would be no. This becomes the basic problem in the style parents tend to adopt in parenting.
- The newlywed will basically need some personal space to understand each other first. They must know each other's positive side, negative side and start complimenting each other. Before understanding each other if they give birth to a young one, the growth of the young will be spoiled in the tenure they take to understand each other.
- Parenting plays a major role in the outcome of every society. Every individual when born in this earth is entitled to grow under their parent's guidance. The character, human value, education, responsibility, respects, and a whole human being is got by parenting. Parenting is a complex activity that includes many specific behaviors that works individually and together to influence child's outcomes.
- Both the contribution of father and mother must be equal to balance and let the child know every aspect of life. A child is not only an asset to a particular

family but an asset to the globe. The child has got its own duty to be done in the world for which it has to be tamed giving proper concentration.

- In this chapter I have also dealt about various styles of parenting like Authoritative style, permissive style, indulgent style and neglectful style. The pros and cons of each style are also dealt elaborately. Also I have dealt about the parenting style in different family pattern, that is the parenting style adopted by the parents in Joint Family, in Nuclear family and in employed family (Employed family is the family in which both the parents are employed).
- The authoritative parents takes a different, more moderate approach that emphasizes setting high standards, being nurturing and responsive, and showing respect for children as independent, rational beings. The authoritative parents expect maturity and co-operation, and offers children lots of emotional support which is very much essential.
- The very meaning of the style is got from its name “authoritarian”. This style of parenting involves strict, regulated and a stiff way of parenting. Authoritarian parents are obedience and status oriented who expect their orders to be obeyed, without explanation.
- The Indulgent style is a style of parenting which to the maximum lacks in authoritarian style. The parents of this style believe that real showing of love to their child and feeling their love back is the ultimate goal in parenting. The parents of this style shower limitless love and attention but they don't

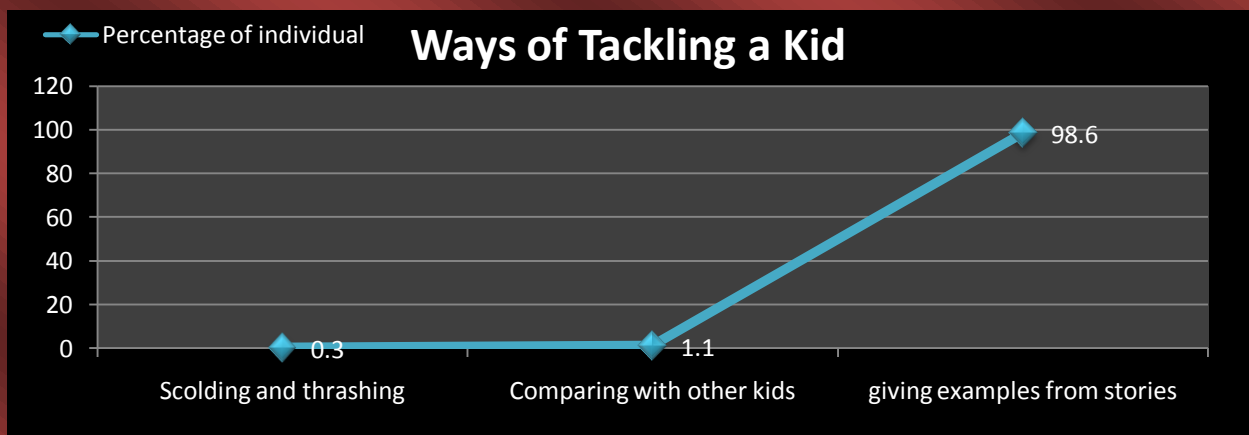

reprimand them for their wrong behavior. There are no rules or demands set for the children and they will lack directive guidance from their parents.

- ☛ The neglectful style of parenting is completely opposite to that of an involved parenting style. They neither show love or attention to their children nor set them any limits or rules. They totally don't get involved in the life or growth of their children.
- ☛ Finally in the end note I have discussed about the parenting trend that is needed for the future generation and the influential components of the child's growth.

CHAPTER 5: THE RESPONSIBILITIES OF RELATIONSHIP

- ☛ In this chapter I have dealt about the responsibilities that each relatives got on one another be it a parent, aunt, uncle, sister, brother, friend, neighbor and so on. In this world of busy schedule it very true and can be observed that individuals forget the responsibility they have towards each others.
- ☛ In this chapter I have discussed about some of the flaws that is prevailing in the relationships and how a relationship should be for its importance and responsibilities.

- In this chapter I have dealt about the responsibilities of 10 kinds of relationship like parents, grandparents, friends, neighbours, 3rd order relatives, soul mates, siblings, step relatives, Romeos and Juliets.
- I have dealt with duties and the degree of alertness an individual must hold at their different angle of relationship from a child to a grandparent or neighbor. The individual in the current trend are oriented very much professionally where they tend to forget the personal sphere.
- Both the achieved relationship and the ascribed relationship are dealt in this chapter. The individuals must be doubly, triply careful in choosing their achieved relations making sure of their trueness towards their relationship and the ascribed relations are to be made aware of their mistakes, so at least at a point of time there are chances for changes.

- From the above graph drawn from a poll in orkut states that the authoritative or the permissive style of parenting is best and that is the perfect way of tackling kids in the positive way.

CHAPTER 6: THE TRANSFORMATION OF EDUCATION

- ✦ Education is the important constituent in the man making process of any individual and now it has become a robot making machine of the society. Education has become full of theory without instilling the practical implication of the knowledge.
- ✦ In this chapter I have dealt about the evolution of education system. How the education was at ancient times, medieval times and modern times. Earlier in the starting days there were no such proper institutions set for the sake of education. Education started its travel from the practical side that is in the earlier days education was nothing but learning about the family's sustenance. Later it evolved into philosophy and now into pure theoretical science.
- ✦ There was no such institution or proper place setup or stipulated hours of time for educating their young ones in the ancient days. Education was not scientific, education was regarded as a service and not business, education was practical and taught the way to live life, education imparted ethical value, human value and moral value inside the individual.
- ✦ There were specific building built at places which was termed as university in the medieval period, derived from a Latin word *universitas magistrorum et scholarium*, which roughly means "community of teachers and scholars" and college again derived from a Latin word which means "a group whose

members pursue shared goals while working within a framework of mutual trust and respect.” Education at these times was philosophical like meta-science, law, philosophy, etc.

- Education in the modern times evolved to be both scientific and social. There rose many educational institutions which functioned by collecting fees from the students. Education was divided into primary education, secondary education and higher education.
- There came assessment which tested the knowledge acquired by the individual. The discipline of science was considered to be important and education shifted completely science oriented.
- I have also discussed about the disadvantages and the evils that is prevailing in the current system of education and also the different component in which the education is getting degraded and the ways in which it can be oriented in the direction of up gradation.
- For the final part I have concluded by saying that education is not alone the science, philosophy or the arts but even the art of living life and the process of learning human values to live with humanity.

CHAPTER 7: THE TECHNOLOGY IN TIME MACHINE

- For most of the time, technology is always considered to be a boon. From the very minute the technology had its birth on this earth it was just viewed to be a machine or a thing that reduces the workmanship and makes the work easier for human.
- We have never given a thought before any invention in the present whether it would serve us in the long run. Immediate solutions for the problem in the present was the motives always but have we ever given a thought of how will those solutions serve the purpose in the future?
- In this chapter I have discussed about the mistake committed by the individual and the carelessness and about the rapidity they are drowned in. And also about the different periods of technology like the primitive, gothic and contemporary technology.
- The turning point in the technological evolution of ancient period by the humankind was the discovery and utilization of fire. Fire with wood and charcoal allowed early humans to cook their food to increase its digestibility, improving its nutrient value and broadening the number of foods that could be eaten.
- If we observe the technologies of the medieval period, its focus was on the humanity, to enhance and support the living of the humanity in the long run

and it was from here the transition shifted to rapidity and a short term solutions for problems.

- The very apt example of this could be the paper that was submitted at our series 1 international conference on progressive global development. The paper was on CFD analysis and experimental investigation of CI engine using hydrogen with diesel. It was said that hydrogen could be considered as the alternative fuel for the conventional fuel that is being used commonly now. It was also said that along with hydrogen, alcohols (methanol and ethanol), liquefied petroleum gas (LPG), compressed natural gas (CNG) and vegetable oils can be used as alternative fuels.
- In the review process the reviews or the clarifications that were put forth were the ethanol is derived from crushing potatoes, corn, sweet potatoes, sugarcane and other plants. Now due to the population explosion we are converting all agricultural land into commercial plots where after years we could not use this as an alternative fuel. And in the case of methanol, the methane gas in this is not advisable as it is toxic in nature. All the alternatives that were given was for the immediate solution and in the long run the same solution will change into problems.
- For the final part I have taken the chapter in the way to conclude that nature, technology and life, altogether becomes as whole it make life beautiful and even if you tend to affect one the other will get affected automatically.

CHAPTER 8: REVERTING THE LOST SERENITY

- Environmental issues are becoming the primary concern of all human being. At one side we have individuals contributing pollution and ill things to the environment and other side we have individuals discussing and protesting against the environmental problem but do we have any individual or governance who really, true from their heart have taken any step towards reverting the serenity of the environment.
- On a simpler view, environment is the surrounding condition where there is existence of any species or life. Both the existence of life and environment are inter-related. It is very important that the serenity of the environment should be maintained for the long and healthy existence of the living organisms. It is the duty of each and every individual soul on this earth to take care of their surroundings or environment.
- In this chapter I have dealt about the different environmental problems prevailing in the present and the step that has to be taken in order to revert back the lost serenity of our globe.
- There are problem in getting fossil fuel as it is a non-renewable resource. The amount of heat found in the atmosphere at the current scenario is more and it is very much possible for producing electricity through solar energy. It is that a large amount of space was needed earlier for trapping the solar energy which

proved expensive. It was so because the amount of heat then was only from light energy and it is much low. But now heat energy can be easily trapped and used by the pair production process as the globe is serving as the reservoir of heat. And what are we to do with the electricity needs in the future? When there is going to be no fossil fuel or the basic raw material, the space is going to be idle. It is for sure that there can be no compromise from the public end in their sophistication and affordability. Hence the vast space, the atmosphere with global warming can be used for producing power by the same process of pair production whereby we could also reduce the intensity of heat which is prevailing in the present, stabilizing the environmental conditions progressively.

- There are battery operated vehicles in the market, those vehicles are run using the batteries that could be charged electrically. There is no letting out of smoke, no traffic violations as the vehicle can run only at maximum speed of 40 Kilometer per Hour. Likewise there can battery driven cars and vehicles which could benefit us in the same way. A battery driven car accompanied by an additional emergency battery that could be used when there is no sun light. All the petroleum wells and its pollution can be prevented easily. Just think of solar, earthy power bunks instead of the present petroleum and diesel bunks, well regulated traffic, no more accidents because of over-speed, economized society, pollution free travel, wow won't it look amazing?
- For the concluding part I have said that complication in anything will have a disastrous end result. We mustn't complicate things by adding things after

things. Be simple and live with the nature understanding the life with adding sophistication in our own way making us fit to avail the same in a straight manner. Have an open thinking and approach, any task with lot of thinking which will never fail us in the issue we take.

CHAPTER 9: CULTURAL DIVERSITY

- In this period of globalization managing the cultural changes and cultural differences is being a great task to manage. In this chapter I have dealt what culture actually is, and to which degree must this culture be given importance. There are two things in this world one is natural, the one which is given by nature and the other is artificial or man-made, the one which is designed are processed by man. Be it natural or man-made things both are prone to changes. Change is inevitable in the dynamic world everything from the size of earth to the type of grass everything has its own evolution. Man-made things are highly vulnerable to changes than the natural things.
- Culture being a man-made issue must have been changed but we follow the same pattern even if we feel it to be stressful in the name of value and tradition. There are minor changes but people are keen about the culture followed by others and not by them which creates the problem. The value cannot be sustained but progressed for the changing needs only then it can exist everlasting. Earlier day's marriage ceremony took place for three to four

days but now everything gets over in a day. Hence I have given a glance over the different aspects of culture and cultural changes in this chapter.

- Offending Globalization for the reason of cultural shrink is not advisable because everything in the universe has got both positive and negative sides. It is we the six sensed human being who has to analyze and grasp the progressive change needed for the up gradation of life. We are now progressing towards the seventh sense, when the advantage of sixth sense promoting an individual to be as he is, is not felt. Culture is not an ascribed status for early human evolutions. It was not something structured very early before the emergence of humanity. It was we the Human Being who structured the culture, tradition and customs for our convenience of socializing, with a common reinforcement of humanity which is lost for authority as authentication.
- If seen scientifically we all Human community, were the evolution of animals. Do animals have Caste? Do animals have Custom, tradition, culture, status, etc?.But they all have specific traits for each that have been in practice for their living, for their carrying as a community. It was all due to migration and the civilizations people have different cultures and customs, which cannot be restrictive, but need to remain changing to facilitate comfort to the members. A practice regarded as illegal in one region is legal in other. Both the place have the people with same blood, flesh, skin, bone, nerve, muscle, etc. then how can a practice in one considered as illegal is considered legal in other? Culture or tradition was bought into the practice when people did not have so

much technologies, Exposure and exchange. Culture was introduced just to regulate the journey of life in a comfortable and enjoyable manner. People at that time had the chance to amble only within their living region and hence adapting to the culture of particular region was very easy for them. But in this period of globalization and hi-fi technology people must understand a thing. Every individual on this universe has their own right of living and others have no right to interfere and gossip about one's way of leading life. The concept to rule over others, restrict others to oblige to authority in the name of cooperation is to have control on others not to upgrade from the existing pattern, which is against evolution theory and which has not been realized for the rules executed in favour of the administrators, which is easy for them, who ought to execute norms for the ease of the target group.

- For the last I would like to say that Earth is our land, Humanity is our Identity, Morality is our virtue and ethics is our life, so no individual is naturally given or fixed with region, religion, culture, tradition or custom. It was all what we formulated in the course of civilization and governance for masses and are to be flexible with the trend of globalization as change is inevitable and execution of governance for individual is possible.

CHAPTER 10: THE BONAFIDE GOVERNANCE

- Government is an essential point for the functioning of regulated public life. There are various departments in the government sector for its best service. But the important thing, which is to be noted, is whether the government is functioning for what it has to or not. There are lots of injustices taking place in the current governance. The whole meaning of democracy, secularism is being spoiled and the governance of authority is only present in the current scenario.
- In this chapter, I have dealt about the reason for the birth of governance, the role played by the governance in the present and the necessary changes that ought to be made for implementing the real meaning of governance. I hope the public, as individuals will join in the reformation and take the globe to a more civilized and reformed status. The democratic governance has already way for the same, involvement of individual in the governance which do not need representatives as political parties.
- I have also structured out the format of global governance, the different category of government in global governance, their hierarchy, their departments, the way of election, the eligibility for contesting candidate, the means of eradicating corruption and so on.
- Firstly every country must be bought under United Nations. The UN will be the global capital as like the present Central Government. Each country will have a President who comes next to the UN's President. Next to that there will Governors for every state.

- All the heads of these three categories must be elected by the people directly. The President of the UN be elected by all global citizen, The President of the country be selected by the countries citizens and Governor by the individuals of the state.
- The UN and the Central Ministry alone will have departments like the Education, Agricultural, Environmental, Telecommunication, Home ministry for protection against natural calamities; etc will be appointed by the respective heads, form the aspirants of public services expressed through proven contributions and not simply by examinations. The ultimate power of the global governance is vested in the hands of the UN President and the ultimate power of the country will be the country's President. The officers of public services that is the secretaries of each state will the department representatives of the respective state and the powers of execution lies with them. The duty of the president is to convey the needs of the public received as grievances and the duty of the officials are to execute plans for the same to be approved and passed for public notification.
- There will be no political party existing. The candidate contesting for the post of governance must be from the age of 25 to 60 and can be any individual citizen; the candidate must be out-and-out known with the constitution and human rights , well exposed to the real time situations and the caste , religion, education are being understood as earned qualities that they become individual trait for global exposure.

- ✦ In the conclusion part I have concluded saying that always real governance can be achieved when the governance is in the hands of aspirant. The one who has a lifetime aspiration of leading the public can be a good leader with positive progression.

CHAPTER 11: STREAMLINING THE ECONOMY

- ✦ Economy plays a major role in deciding the status of a country. But in the present there a lot of imbalances prevailing regarding the economy and there are enormous amount of black activity happening in the society degrading the progression of the world leading it to extinction. There must be proper flow regulated in the matter of money and the economy must be balanced both in the end of input and output. It is not to be construed the balance at beginning and at the end , but at every stage of an activity that the errors will not get accumulated.
- ✦ In this chapter I have discussed about the reason for the origin of money, the approach individual's have towards the money, the problem in the current economic system and the ways of standardizing it.

- For a better understanding in this chapter I have started with the meaning, origin and reason for economy; the way of approach towards money; the problem faced in the present due to economy; the ways of standardizing.
- When the population increases eventually there will be increase in the amount of duty in every sphere, then where the problem of unemployment comes? This still has been a mystery to me. There are piles of cases pending in the court; they only increase the working time of court but not increasing the working individuals there. Don't the people working there have family with whom they are supposed to spend certain quality of time?
- Every individual must understand that earning money is only for the work they give out and they just cannot be paid high for the sake of others earning huge amount. This trend is currently found in the present, from the sphere of mason and servants of the equal sphere.
- Every bank must be inter-linked and transaction to any bank must be known to the apex body as consolidated accounts which takes care of even losses that the same progressively contributes to avoiding errors and upgrade quality of service, by which the black money transaction can be eradicated. It is found that in a large extent there is black money deposited in banks of other countries like Swiss, America, Etc. The purpose of having savings account must be understood and made worthy. Even an earning of Rs.20 can be deposited for saving and there can be no minimum balance set here. People don't trust

their neighbors but without even a thought they feel safe to deposit their money in a bank which must be responsible for the trust it has got.

- Saving the best for last I have concluded saying that economy either in the strata of governance or in the strata of family, it must always be balanced, allowed to float equally, proportional with humanity, care and affection. Economy must be supporting the life of any individual and must not be burden or make to lead illicit life just for the sake of status and saving. There are ample evidences where the deposits with international banks by the individuals goes unclaimed and made their own simply because they are illicit and the policy of the banks alone be blamed and taken to reformations by the United Nations. It is the best of example that nature has its control as most of the illicit cash flows came into national funding of any developing country by contributions of developed countries and went back to the source on its own. Nothing can be free, but for inclusion with conviction.

CONCLUSION

For the concluding part I would like to say that life can be made possible anywhere in the universe and it is for sure that life on moon is highly possible as it is made by parts of earth's surface but the thing has to evolve naturally and not like the experiment of Stanley Miller (artificially). The space in the earth is common for everybody, even now the land area underneath the water bodies is connected and it is we, who made all the demarcations. It is to be understood

that a minute problem in Australia will definitely have its consequent result in the continent of America. We must always consider the land as a whole and take any measures remembering this. Caste, Religion, Culture, Tradition, Customs are all not ascribed status but an achieved status. The planet in which we are born and the parents to whom we are born are alone the ascribed status of any individual. Driving need for every individual will not be same for every individual and hence forcing them with a preset syllabus or curriculum of education is not advisable. Leading life is personal and even the personal life of public figure is personal and others have no rights to comment on it. Money is just a printed paper which has got some importance in leading life but not the only thing which is important in life. Importance must be given a balance in every aspect of life as everything together will make the life complete and not just a single thing. My earnest praying to the nature is that every social component must be standardized for a perfect progressive global society and I will extend my maximum contribution for this change within my ambience.
